Title: CULTURE TREATING DEVICE AND AUTOMATIC CULTURE TREATING DEVICE

Abstract: A culture treating device and an automatic culture treating device capable of rapidly and accurately coping with a trouble wherein the state of a space for applying a specified treatment to cells stored in an automatic culture treating device container such as a culturing container is varied. The culture treating device comprises a treatment part applying the specified treatment to the cells stored in the openable automatic culture treating device container in a space demarcated from the outside, a detection part detecting a specified state in the space in or near the space, and a control part controlling the treatment part to close the container when the detection part detects the specified state with the container opened.
